

OUR PROCESS

Construction Link has a team of trained professional with wide knowledge in construction. Our team uses computer-aided design and drafting software such as Revit/CAD to develop drawings and plans for every project with each costumer. The team's technical knowledge allows them to propose different solutions in every specific project situation. They use multiple angles and views (2D/3D) to depict the association of components and systems

We will prepare a set of job specific shop drawings for each project which will be part of a complete set of Submittal package for each costumer.

Project Analysis

- Thorough analysis of plans, specs, addenda, RFIs and contract documents.
- Bring to the costumer attention if potential issues might come out after analyzing BIM models.
- Propose details and solutions to different project circumstances.

CAD Drawings

- Elaborate job specific roof plans, details, elevations, 3D views anything needed for a fully project comprehension.
- Create a taper plan for every roof on the project.
- Take-off per system and include sqft as part of the shop drawings
- Elaborate Building Information if required.
- 3D modeling for unclear details or as requested by the costumer.

Shop Drawings

- Combine all sets of shop drawings in the submittals package.
- Prepare as builds drawings as required.
